Int 21H, AH=3EH

Version

2 and higher

Brief

“CLOSE” - CLOSE FILE

Family API

Input

- AH = 3Eh
- BX = file handle

Return

- CF clear if successful
  - AX destroyed
- CF set on error
  - AX = error code (06h) (invalid handle)

Notes

if the file was written to, any pending disk writes are performed, the time and date stamps are set to the current time, and the directory entry is updated

recent versions of DOS preserve AH because some versions of Multiplan had a bug which depended on AH being preserved
