

osFree project

 Like it? Support us!  Join us!

osFree is a [\(Free Open Source software\) operating system](#) development project, aiming to replace eventually all [OS/2](#) subsystems with Open source analogues. It aims for [OS/2 Warp 4 \(Merlin\)](#) as a base compatibility system, which does not mean that we will not support features of newer ([OS/2 Warp Server for e-business](#) and [eComStation](#)) [OS/2](#) versions. This includes rewriting not only user-level code but the [OS/2](#) kernel too.

We're collecting existing code for [OS/2](#) subsystems for years. Also we are developing our own bootloader named [FreeLdr](#) and [OS/2](#) personality for [L4 microkernel](#), i.e. a number of servers, implementing the Control Program ([OS/2](#) kernel) Interface functionality in userspace. See [osFree design and development concept](#) for more details. Visit the [Chat Channel on the EFNET](#)

Several projects with similar goals exist (or existed). [Here](#) is the brief comparison of goals and tasks of different projects.

Our project is reusing the code of many [opensource projects](#).

Roadmap

We're now at the **alpha** stage, which means that the current version is **not feature-complete nor stable** and not recommended for everyday usage. The 0.0.x release series will still stay in alpha stage, and 0.9 release series will be marked as beta, meaning a system which is suitable for every day use.

The next release will be 0.0.5, with an earliest projected release date being December, 2009. See our [osFree roadmap](#) for details.
