Family API Considerations

Some options operate differently in the DOS mode than in the OS/2 mode. Therefore, the following restriction applies to VioScrUnLock when coding in the DOS mode:

The status always indicates the unlock is successful (return code = 0).

C Binding

```
#define INCL_VIO

USHORT  rc = VioScrUnLock(VioHandle);

USHORT           rc;            /* return code */
```

MASM Binding
