# Int 21H, AH=3FH

## Version

2 and higher

## Brief

“READ” - READ FROM FILE OR DEVICE

## Family API

## Input

```
AH = 3Fh
BX = file handle
CX = number of bytes to read
DS:DX -> buffer for data
```

## Return

CF clear if successful

```
AX = number of bytes actually read (0 if at EOF before call)
CF set on error
AX = error code (05h,06h) (see #01680 at AH=59h/BX=0000h)
```

## Notes

data is read beginning at current file position, and the file position is updated after a successful read  
the returned AX may be smaller than the request in CX if a partial read occurred

if reading from CON, read stops at first CR

under the FlashTek X-32 DOS extender, the pointer is in DS:EDX

BUG: Novell NETX.EXE v3.26 and 3.31 do not set CF if the read fails due to a record lock (see AH=5Ch), though it does return AX=0005h; this has been documented by Novell
