Int 21H, AH=58H, AL=01H

Version

2.11 and higher

Brief

SET MEMORY ALLOCATION STRATEGY

Family API

Input

```
AH = 58h
AL = 01h
BL = new allocation strategy (see #01679)
BH = 00h (DOS 5+)
```

Return

```
CF clear if successful
CF set on error
AX = error code (01h) (see #01680)
```

Notes

```
the Get subfunction returns the last value set
setting an allocation strategy involving high memory does not
  automatically link in the UMB memory chain; this must be done
  explicitly with AX=5803h in order to actually allocate high memory
a program which changes the allocation strategy should restore it
```

```
before terminating
Toshiba MS-DOS v2.11 supports subfunctions 00h and 01h, as does the
TI Professional MS-DOS v2.13
DR DOS 3.41 reportedly reverses subfunctions 00h and 01h
(Table 01679)
Values for DOS memory allocation strategy:
00h low memory first fit
01h low memory best fit
02h low memory last fit
---DOS 5+ ---
40h high memory first fit
41h high memory best fit
42h high memory last fit
80h first fit, try high then low memory
81h best fit, try high then low memory
82h last fit, try high then low memory
```
