Int 21H, AH=41H

Version

2 and higher

Brief

“UNLINK” - DELETE FILE

Family API

Input

```
AH = 41h
DS:DX -> ASCIZ filename (no wildcards, but see notes)
CL = attribute mask for deletion (server call only, see notes)
```

Return

CF clear if successful

```
    AX destroyed (DOS 3.3) AL seems to be drive of deleted file
CF set on error
    AX = error code (02h,03h,05h) (see #01680 at AH=59h/BX=0000h)
```

Notes

(DOS 3.1+) wildcards are allowed if invoked via AX=5D00h, in which case the filespec must be canonical (as returned by AH=60h), and only files matching the attribute mask in CL are deleted

DR DOS 5.0-6.0 returns error code 03h if invoked via AX=5D00h; DR DOS 3.41 crashes if called via

AX=5D00h with wildcards

DOS does not erase the file's data; it merely becomes inaccessible because the FAT chain for the file is cleared

deleting a file which is currently open may lead to filesystem corruption. Unless SHARE is loaded, DOS does not close the handles referencing the deleted file, thus allowing writes to a nonexistant file.

under DR DOS and DR Multiuser DOS, this function will fail if the file is currently open

under the FlashTek X-32 DOS extender, the pointer is in DS:EDX

BUG: DR DOS 3.41 crashes if called via AX=5D00h
