Int 21H, AH=46H

Version

2 and higher

Brief

“DUP2”, “FORCEDUP” - FORCE DUPLICATE FILE HANDLE

Family API

Input

```
AH = 46h
BX = file handle
CX = file handle to become duplicate of first handle
```

Return

CF clear if successful

```
CF set on error
    AX = error code (04h,06h) (see #01680 at AH=59h/BX=0000h)
```

Notes

closes file with handle CX if it is still open

DOS 3.30 hangs if BX=CX on entry

moving file pointer for either handle will also move it for the other, because both will refer to the same system file table
