

This is part of **Family API** which allow to create dual-os version of program runs under OS/2 and DOS

**Note:** This is legacy API call. It is recommended to use 32-bit equivalent

2021/09/17 04:47 · prokushev · [0 Comments](#)

2021/08/20 03:18 · prokushev · [0 Comments](#)

This call accesses a shared memory segment previously allocated by another process.

### Syntax

DosGetShrSeg (Name, Selector)

### Parameters

;Name (PSZ) - input : Address of the name string associated with the shared memory segment to be accessed. The name is an ASCIIZ string in the format of an OS/2 filename in a subdirectory called \SHAREMEM\, for example, \SHAREMEM\PUBLIC.DAT. ;Selector (PSEL) - output : Address of the selector for the shared memory segment.

### Return Code

;rc (USHORT) - return:Return code descriptions are: \*0 NO\_ERROR \*2 ERROR\_FILE\_NOT\_FOUND \*4 ERROR\_TOO\_MANY\_OPEN\_FILES \*123 ERROR\_INVALID\_NAME

### Remarks

DosGetShrSeg provides access to a named shared segment allocated by another process with [DosAllocShrSeg](#). The selector returned by DosGetShrSeg is the same as the one returned by the DosAllocShrSeg call.

A usage count is maintained for a named shared segment. Issuing DosGetShrSeg increments the count, and issuing [DosFreeSeg](#) decrements the count. When the usage count equals zero, the named shared segment is deallocated. Once the segment has been deallocated, it must be reinitialized by a call to DosAllocShrSeg.

To access shared memory that is allocated by another process with [DosAllocSeg](#) and [DosAllocHuge](#) requests, a process issues [DosGetSeg](#).

### Bindings

## C

```
<PRE> #define INCL_DOSMEMMGR
```

```
USHORT rc = DosGetShrSeg(Name, Selector);
```

```
PSZ Name; /* Name string */ PSEL Selector; /* Selector of shared segment */
```

```
USHORT rc; /* return code */ </PRE>
```

## MASM

```
<PRE> EXTRN DosGetShrSeg:FAR INCL_DOSMEMMGR EQU 1
```

```
PUSH@ ASCIIZ Name ;Name string PUSH@ WORD Selector ;Selector of shared segment (returned)
```

```
CALL DosGetShrSeg
```

```
Returns WORD </PRE>
```
