

# SOMError

This call generates error message and terminates process if fatal error.

## Syntax

```
void (*SOMError) (int errorCode, string fileName, int lineNumber);
```

## Parameters

- `errorCode` ([int](#)) - input : Error code.
- `fileName` ([string](#)) - input : Name of source file where error was occurred.
- `lineNum` ([int](#)) - input : Line of source file where error occurred.

## Return Code

None

## Notes

SOMError is a global variable and can be replaced by user function

## Example Code

```
#include <som.h>

SOMError(SOM_Fatal(12), __FILE__, __LINE__);
```
