Minesweeper

Minesweeper is a game.

The goal of Minesweeper is to uncover all the squares on a grid that do not contain mines without being “blown up” by clicking on a square with a mine underneath. The location of most mines is discovered through a logical process, but some require guessing, usually with a 50-50 chance of being correct. Clicking on the game board will reveal what is hidden underneath the chosen square or squares (a large number of blank squares [bordering 0 mines] may be revealed in one go if they are adjacent to each other). Some squares are blank while others contain numbers (from 1 to 8), with each number being the number of mines adjacent to the uncovered square.

To help the player avoid hitting a mine, the location of a suspected mine can be marked by flagging it with the right mouse button; however, if a player is unsure if a square is safe or not, they can tag it with a question mark (?). The game is won once all blank or numbered squares have been uncovered by the player without hitting a mine; any remaining mines not identified by flags are automatically flagged by the computer. However, in the event that a game is lost and the player had mistakenly flagged a safe square, that square will either appear with a red X, or else a red X covering the mine (both denoting the square as safe).

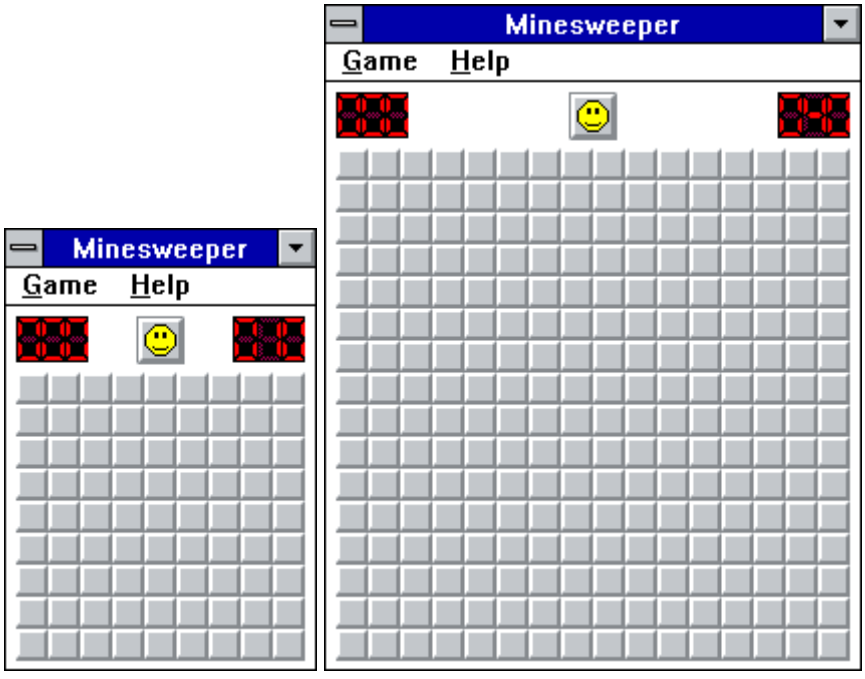

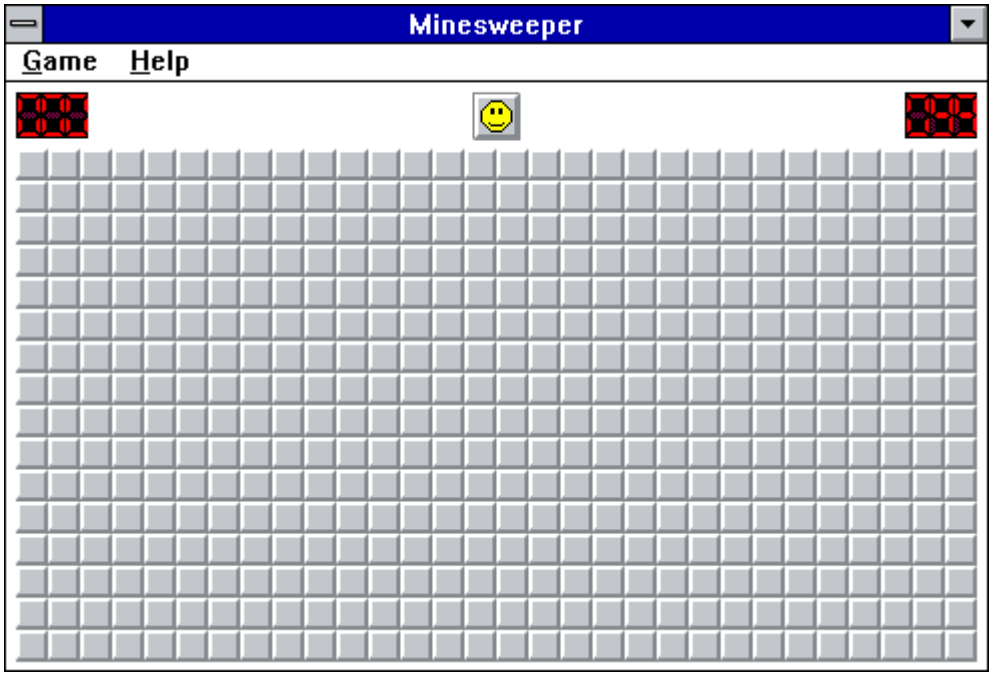

Starting game

To start new game select **New** item from **Game** menu, press F2 or click Smile button.

Game mode

You can change game mode by selecting item **Beginner**, **Intermediate** or **Expert** from **Game** menu. Also you can define custom game mode by selection **Custom** item.

Help marks

Right mouse click allow to set '?' marks. You can disable or enable such mode selecting **Mark (?)** item from **Game** menu.

Best times

To show best time results of previous games select **Best Times** item from **Game** menu.

Download

You can download source code and binaries from GitHub. Minesweeper comes under LGPL-2.1 license.
